

Question

define a class Student

rollno

name

age

marks

parameterized constructor

getter methods

create 5 objects and store them inside list.

using java8 stream api:

1) find out name starts with 's'

hint:- use "filter" to check names start with "s" and "forEach" method to display all those names.

2) how many students got more than 70

hint: use "filter" and "count"

3) how many students in between age 22 and 25

hint: use "filter" and "count"
