

Question:

```
define a class Player
    with
        int playerid
        String name
        int runs
        String countryname

    define
        parameterized constructor and getter methods

create 10 players and store them inside a list.

using java8 stream api:

1) display all the players representing "India".

    hint:- use "filter" to check players representing "India" and
    "forEach" method in order to print them.

2) find out how many players have scored more than 5000 runs.

    hint:- use "filter" to check players scored more than 5000
    runs and "count" method to count them.
```
